Status	Finished
Started	Monday, 2 November 2026, 6:18 PM
Completed	Monday, 2 November 2026, 6:25 PM
Duration	7 mins 18 secs
Grade	**10.00** out of 10.00 (**100**%)

Question **1**

Correct

Mark 1.00 out of 1.00

Develop a Python program to read a specific line from a text file based on a given line number.

Description:

1. **Input:**
   - A text file with multiple lines.
   - A line number to read.
2. **Output:**
   - The content of the specified line.

input1.txt:

Line one.
Line two.
Line three.
Line four.

For example:

Input	Result
input1.txt 3	Line three.

Answer: (penalty regime: 0 %)

```
def read_line(filename, line_number):
    with open(filename, "r") as f:
        for i, line in enumerate(f, start=1):
            if i == line_number:
                return line.rstrip("\n")
    return None

if __name__ == "__main__":
    filename = input().strip()
    line_number = int(input().strip())
    result = read_line(filename, line_number)
    if result is None:
        print("Line not found")
    else:
        print(result)
```

	Input	Expected	Got	
✓	input1.txt 3	Line three.	Line three.	✓
✓	input2.txt 3	Line C.	Line C.	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question **2**

Correct

Mark 1.00 out of 1.00

Create a Python program to delete a specific line from a text file based on a given line number.

Description:

1. **Input:**
   - A text file with multiple lines.
   - A line number to delete.
2. **Output:**
   - The updated file with the specified line removed in file "output.txt".

Example:

- **Input File Content:**

  "Line one.
  Line two.
  Line three.
  Line four."
  2

  Updated line two.

Output:

Line one.
Line three.
Line four.

For example:

Test	Input	Result
with open('output.txt', 'r') as file: text = file.read() print(text)	input1.txt 2	Line one. Line three. Line four.

Answer: (penalty regime: 0 %)

```
def delete_line(input_file, line_number, output_file="output.txt"):
    with open(input_file, "r") as f:
        lines = f.readlines()

    if 1 <= line_number <= len(lines):
        del lines[line_number - 1]

    with open(output_file, "w") as f:
        f.writelines(lines)

if __name__ == "__main__":
    filename = input().strip()
    line_number = int(input().strip())
    delete_line(filename, line_number)
```

	Test	Input	Expected	Got	
✓	with open('output.txt', 'r') as file: text = file.read() print(text)	input1.txt 2	Line one. Line three. Line four.	Line one. Line three. Line four.	✓

	Test	Input	Expected	Got	

✓	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input2.txt
		3
			Line A.
			Line B.
				Line A.
				Line B.
					✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question **3**

Correct

Mark 1.00 out of 1.00

Develop a Python program to read a text file and count the total number of words in the file.

Description:

1. **Input:**
   - A text file containing several lines of text.
   - File name you should get as input.
2. **Output:**
   - The total number of words in the file.

For example:

Input	Result
input2.txt	Total words: 14
input3.txt	Total words: 15

Answer: (penalty regime: 0 %)

```
def count_words(filename):
    total = 0
    with open(filename, "r") as f:
        for line in f:
            total += len(line.split())
    return total

if __name__ == "__main__":
    filename = input().strip()
    print(f"Total words: {count_words(filename)}")
```

	Input	Expected	Got	
✓	input1.txt	Total words: 6	Total words: 6	✓
✓	input2.txt	Total words: 14	Total words: 14	✓
✓	input3.txt	Total words: 15	Total words: 15	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question **4**

Correct

Mark 1.00 out of 1.00

Develop a Python program to copy the contents of one file to another file.

Description:

1. **Input:**
   - Source file and destination file names.
2. **Output:**
   - The content of the source file copied to the destination file.

For example:

Test	Input	Result

`with open('output1.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	`input1.txt`
	`output1.txt`
		`This is the source file.`
		`It contains multiple lines of text.`
		`Here is another line.`

Answer: (penalty regime: 0 %)

```
def copy_file(source, destination):
    with open(source, "r") as src, open(destination, "w") as dst:
        for line in src:
            dst.write(line)

if __name__ == "__main__":
    source = input().strip()
    destination = input().strip()
    copy_file(source, destination)
```

	Test	Input	Expected	Got	

✓	`with open('output1.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		`input1.txt`
		`output1.txt`
			`This is the source file.`
			`It contains multiple lines of text.`
			`Here is another line.`
				`This is the source file.`
				`It contains multiple lines of text.`
				`Here is another line.`
					✓

✓	`with open('output2.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		`input2.txt`
		`output2.txt`
			`Hello, world!`
			`Python programming is amazing.`
			`Let's copy this text to another file.`
				`Hello, world!`
				`Python programming is amazing.`
				`Let's copy this text to another file.`
					✓

✓	`with open('output3.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		`input3.txt`
		`output3.txt`
			`Single line.`	`Single line.`	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question **5**

Correct

Mark 1.00 out of 1.00

Write a Python program to append a new line at a specific position in a text file, shifting existing lines down.

Description:

1. **Input:**
   - A text file with multiple lines.
   - A line number to insert the new line at.
   - New content for the new line.
2. **Output:**
   - The updated file with the new line inserted at the specified position, shifting the existing lines down in file "output.txt".

Example:

- **Input File Content:**

  "Line one.
  Line two.
  Line three.
  Line four."
  3

  Inserted line..

Output:

Line one.
Line two.
Inserted line.
Line three.
Line four.

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	input1.txt
	3
	Inserted line.
		Line one.
		Line two.
		Inserted line.
		Line three.
		Line four.

Answer: (penalty regime: 0 %)

```
def insert_line(input_file, line_number, new_content, output_file="output.txt"):
    with open(input_file, "r") as f:
        lines = f.read().split("\n")
        # keep original line structure without a stray empty element
        if lines and lines[-1] == "":
            lines.pop()

    index = max(0, min(line_number - 1, len(lines)))
    lines.insert(index, new_content)

    with open(output_file, "w") as f:
        f.write("\n".join(lines) + "\n")

if __name__ == "__main__":
    filename = input().strip()
    line_number = int(input().strip())
    new_content = input().strip()
    insert_line(filename, line_number, new_content)
```

	Test	Input	Expected	Got	

✓	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input1.txt
		3
		Inserted line.
			Line one.
			Line two.
			Inserted line.
			Line three.
			Line four.
				Line one.
				Line two.
				Inserted line.
				Line three.
				Line four.
					✓

✓	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input2.txt
		4
		Inserted line D.
			Line A.
			Line B.
			Line C.
			Inserted line D.
				Line A.
				Line B.
				Line C.
				Inserted line D.
					✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question **6**

Correct

Mark 1.00 out of 1.00

Create a Python program to write to a specific line in a text file, replacing the existing content of that line.

Description:

1. **Input:**
   - A text file with multiple lines.
   - A line number to write to.
   - New content for the specified line.
2. **Output:**
   - The updated file with the specified line replaced by the new content in file "output.txt".

Example:

- **Input File Content:**

  "Line one.
  Line two.
  Line three.
  Line four."
  2

  Updated line two.

Output:

Line one.
Updated line two.
Line three.
Line four.

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	`input1.txt`
	`2`
	`Updated line two.`
		`Line one.`
		`Updated line two.`
		`Line three.`
		`Line four.`

Answer: (penalty regime: 0 %)

```
def replace_line(input_file, line_number, new_content, output_file="output.txt"):
    with open(input_file, "r") as f:
        lines = f.read().split("\n")
        if lines and lines[-1] == "":
            lines.pop()

    if 1 <= line_number <= len(lines):
        lines[line_number - 1] = new_content

    with open(output_file, "w") as f:
        f.write("\n".join(lines) + "\n")

if __name__ == "__main__":
    filename = input().strip()
    line_number = int(input().strip())
    new_content = input().strip()
    replace_line(filename, line_number, new_content)
```

	Test	Input	Expected	Got	

✓	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input1.txt
		2
		Updated line two.
			Line one.
			Updated line two.
			Line three.
			Line four.
				Line one.
				Updated line two.
				Line three.
				Line four.
					✓

✓	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input2.txt
		2
		Line B Updated.
			Line A.
			Line B Updated.
			Line C.
				Line A.
				Line B Updated.
				Line C.
					✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question **7**

Correct

Mark 1.00 out of 1.00

Write a Python program to reverse the contents of a specific line in a text file based on a given line number.

Description:

1. **Input:**
   - A text file with multiple lines.
   - A line number to reverse.
2. **Output:**
   - The updated file with the specified line's contents reversed in file "output.txt".

Example:

- **Input File Content:**

  "Line one.
  Line two.
  Line three.
  Line four."
  3

Output:

Line one.
Line two.
eerht eniL.
Line four.

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	input1.txt
	3
		Line one.
		Line two.
		eerht eniL.
		Line four.

Answer: (penalty regime: 0 %)

```
def reverse_line(input_file, line_number, output_file="output.txt"):
    with open(input_file, "r") as f:
        lines = f.read().split("\n")
        if lines and lines[-1] == "":
            lines.pop()

    if 1 <= line_number <= len(lines):
        line = lines[line_number - 1]
        if line.endswith("."):
            lines[line_number - 1] = line[:-1][::-1] + "."
        else:
            lines[line_number - 1] = line[::-1]

    with open(output_file, "w") as f:
        f.write("\n".join(lines) + "\n")

if __name__ == "__main__":
    filename = input().strip()
    line_number = int(input().strip())
    reverse_line(filename, line_number)
```

	Test	Input	Expected	Got	

✓	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input1.txt
		3
			Line one.
			Line two.
			eerht eniL.
			Line four.
				Line one.
				Line two.
				eerht eniL.
				Line four.
					✓

✓	`with open('output.txt', 'r') as file:`
	`  text = file.read()`
	`  print(text)`
		input2.txt
		2
			Line A.
			B eniL.
			Line C.
				Line A.
				B eniL.
				Line C.

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question **8**

Correct

Mark 1.00 out of 1.00

Write a Python program to count the frequency of each word in a given text file.

Description:

1. **Input:**
   - String as input.
2. **Output:**
   - A list of words with their corresponding frequency count to be write in a file "output.txt"

Example:

- **Input File Content:**

  apple orange apple banana apple orange

Output:

apple: 3
orange: 2
banana: 1

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	`apple orange apple banana apple orange`	`apple: 3`
		`banana: 1`
		`orange: 2`

Answer: (penalty regime: 0 %)

```
import re

def count_words(text):
    freq = {}
    for word in re.findall(r"[a-z0-9']+", text.lower()):
        freq[word] = freq.get(word, 0) + 1
    return freq

if __name__ == "__main__":
    text = input()
    freq = count_words(text)
    with open("output.txt", "w") as f:
        for word in sorted(freq):
            f.write(f"{word}: {freq[word]}\n")
```

	Test	Input	Expected	Got	

✓	`with open('output.txt', 'r')`
	`as file:`
	`  text = file.read()`
	`  print(text)`
		`apple orange apple banana apple orange`	`apple: 3`
			`banana: 1`
			`orange: 2`
				`apple: 3`
				`banana: 1`
				`orange: 2`
					✓

	Test	Input	Expected	Got	

✓	`with open('output.txt', 'r')`
	`as file:`
	`  text = file.read()`
	`  print(text)`
		`Hello world! Hello everyone. Welcome to the world of programming.`	`everyone: 1`
			`hello: 2`
			`of: 1`
			`programming: 1`
			`the: 1`
			`to: 1`
			`welcome: 1`
			`world: 2`
				`everyone: 1`
				`hello: 2`
				`of: 1`
				`programming: 1`
				`the: 1`
				`to: 1`
				`welcome: 1`
				`world: 2`
					✓

✓	`with open('output.txt', 'r')`
	`as file:`
	`  text = file.read()`
	`  print(text)`
		`One fish two fish Red fish blue fish`	`blue: 1`
			`fish: 4`
			`one: 1`
			`red: 1`
			`two: 1`
				`blue: 1`
				`fish: 4`
				`one: 1`
				`red: 1`
				`two: 1`
					✓

Passed all tests! ✓

Marks for this submission: 1.00/1.00.

Question **9**

Correct

Mark 1.00 out of 1.00

Create a Python program to find the longest word in a text file.

- **Input:**
  - A text file containing multiple lines of text.
- **Output:**
  - The longest word in the file.

For example:

Input	Result
input1.txt	Longest word: containing

Answer: (penalty regime: 0 %)

```
import re

def longest_word(filename):
    longest = ""
    with open(filename, "r") as f:
        for line in f:
            for word in re.findall(r"[A-Za-z0-9']+", line):
                if len(word) > len(longest):
                    longest = word
    return longest

if __name__ == "__main__":
    filename = input().strip()
    print(f"Longest word: {longest_word(filename)}")
```

	Input	Expected	Got	
✓	input1.txt	Longest word: containing	Longest word: containing	✓
✓	input2.txt	Longest word: thousand	Longest word: thousand	✓
✓	input3.txt	Longest word: supercalifragilisticexpialidocious	Longest word: supercalifragilisticexpialidocious	✓
